TECHNICAL SKILLS

Languages: Python, SQL, Java, Dart, C++

Data & Cloud: AWS, Amazon Redshift, StarRocks, Cube Core, PostgreSQL, SQL Server (SSMS), Google Cloud

ML & Analytics: pandas, scikit-learn, regression and classification modeling

BI & Front End: QlikSense, Power BI, Plotly Dash, React, Flutter

Tools: Git/GitHub, Spring Boot, Model Context Protocol (MCP), Claude Code

WORK EXPERIENCE

Kenco Logistics

Chattanooga, TN

Business Intelligence Developer / Data Scientist I

Nov 2024 – Present

- Built and own **Flash**, a full-stack spot-freight pricing engine (Python, Plotly Dash, AWS) used by 50 brokers and pricing analysts to quote ~7,500 loads per month. Replaced a fragmented workflow across DAT, Sonar, and analyst-maintained Excel with a single UI backed by an API that consolidates market feeds and returns an ML-generated price; delivered in 3 months with pricing analysts as design partners.
- Designed and shipped the brokerage organization's first QlikSense KPI dashboard, including the underlying data model — available to all brokers and displayed across 10 operations-floor TVs for real-time shipment visibility and performance trending, replacing ad hoc MercuryGate pulls into Excel.
- Built a 20-minute-refresh ETL pipeline landing 10 Redshift tables into a StarRocks-backed Cube Core semantic layer, cutting query latency for downstream analytics.
- Developed an MCP server over the semantic layer that lets brokerage operations query their own data in natural language through Claude; currently extending it to generate and edit React dashboards directly from the modeled data.
- Sole maintainer of Flash and of all brokerage and transportation-management Qlik reporting, on a 4-person BI team within a 22-person analytics organization; partner with the data science and software engineering teams on delivery.

Business Intelligence Intern

May 2024 – Sept 2024

- Automated a weekly market-rate report in Python, scraping two external pricing sources into a SQL data warehouse to feed a downstream ML bidding model — eliminating a full day of manual Excel work each week.
- Delivered weekly enhancements to the Transportation Control Tower Qlik application based on requests from transportation operations.
- Debugged and modified existing QlikSense warehousing applications to meet customer requirements.

Transportation Specialist Intern

May 2023 – Aug 2023

- Analyzed shipment volume trends against market data in Excel to advise bid pricing changes.

PROJECTS

Holland Walking Tour App — Senior Capstone, Hope College

Jan 2024 – May 2024

- Self-taught Flutter and Dart to build a cross-platform iOS and Android front end.
- Built and deployed the backend using Java, Spring Boot, PostgreSQL, and Google Cloud.

EDUCATION

Hope College — B.S. Computer Science

Holland, MI • May 2024

ACHA varsity hockey, 2020–2024 — national championship tournament appearances in 2021 and 2022.
